Lanzo Trenchless Technologies Announces Dual North & South Headquarters *Trenchless Services Now Available Throughout the Americas*

FOR IMMEDIATE RELEASE—April 17, 2013—*Deerfield Beach, FL*— Lanzo Trenchless Technologies (formerly Lanzo Lining Services), a leader in trenchless underground infrastructure rehabilitation and repair, and Cured-in-Place Piping (CIPP) technologies, recently announced the opening of a second headquarter location in Detroit, Michigan. The dual headquarter business is in response to the expansion of the Company's operations throughout North American and into Central and South America.

The two headquarters are strategically located in Detroit, Michigan, and Deerfield Beach, Florida. They offer the full range of CIPP and infrastructure repair technologies to provide cost-effective, less invasive alternatives to replacing failing infrastructure.

"We work with public, government and private clients both nationally and internationally to solve intricate underground infrastructure issues," explains Fred Tingberg, Business Development Manager for Lanzo Trenchless Technologies. "The dual headquarters enables us to provide our customers with the most responsive service in the industry. The ability to have local representation and local crews is what sets us apart from conventional contracting," Tingberg said.

To date, Lanzo Trenchless Technologies has conducted trenchless repair on more than ten million linear feet of pipelines in diameters as large as 120" throughout North America. Additional trenchless technology services include: Large Sewer, Storm Drain & Non-Circular Pipeline Renovation; Manhole & Tunnel Repair; Cured-in-Place Pipe Lining Rehab (CIPP); Pressure, Gas, Force Main Repair; Pipeline Cleaning & CCTV Inspection; Air Plenum Ventilation Duct Renovation; and NSF 61 Water Main Rehabilitation.

For more information contact Lanzo Trenchless Technologies at 954-973-9700 or visit our website at www.lanzo.net.

One example of Lanzo Trenchless Technologies' Cured-in-Place Pipe (CIPP) rehabilitation technologies is this UV-Cured pull-in fiberglass liner system. On this rehabilitation project, a pipe liner was impregnated with a polyester resin to repair 3345 feet of piping under a main thoroughfare in Dover, Delaware. The liner was pulled inside the existing pipe and once in place, a clear polyethylene bladder inside was inflated with air to conform it to the pipe interior.

About Lanzo Companies

Lanzo Companies is a family-owned group of businesses consisting of Lanzo Holdings, Lanzo Construction, and Lanzo Trenchless Technologies along with Lanzo Lining International, Lanzo Materials & Supplies and Lanzo MRC Manufacturing.
